

Dental Visits

1. All patients receiving chemotherapy should have blood work (CBC), prior to any dental work. Patients with bleeding disorders should call the office prior to any work.
2. When you are in the office for your chemo you may check with the nurses regarding a good time for a dental cleaning.
3. No dental extractions if you are on chemo or Zometa. If an extraction is necessary you must check with the nurse first when you are in for treatment.
